

MUSTOFA KHOIRUDIN

SOFTWARE ENGINEER

Perumnas Blok C No.119, Karawang, Jawa Barat | mustofakhoirudin5157@gmail.com
www.linkedin.com/in/mustofa-khoirudin-335a0a341

SUMMARY

Software Engineer with experience in developing and maintaining enterprise web and mobile applications across manufacturing, healthcare, and business operations environments. Proficient in Laravel, .NET, PHP, C#, Vue.js, Golang, Flutter, MySQL, and PostgreSQL, with strong expertise in RESTful API development, system integration, and database design. Experienced in delivering scalable software solutions, workflow automation systems, and digital transformation initiatives that improve operational efficiency and business productivity.

PROFESSIONAL EXPERIENCE

Internship, PT GS BATTERY KARAWANG PLANT

SEPT 2025 - FEB 2026

- Developed and maintained enterprise-grade applications using C# (.NET) to support manufacturing operations, production monitoring, and business-critical data management processes.
- Engineered RESTful APIs and backend services for data processing, system integration, and secure information exchange across internal platforms.
- Collaborated with frontend developers utilizing Vue.js and JavaScript to deliver responsive, scalable, and user-friendly business applications.
- Performed application testing, debugging, performance tuning, and system maintenance to ensure reliability, security, and operational continuity.
- Worked closely with stakeholders to analyze business requirements and implement software solutions that enhance productivity and streamline operational workflows.
- Contributed throughout the Software Development Life Cycle (SDLC), from requirement analysis and development to deployment and ongoing support.

B&B TOUR AND TRAVEL

JUN 2022 - JULY 2025

- Developed and enhanced web-based applications supporting booking management, customer relationship processes, and day-to-day business operations.
- Designed and implemented responsive user interfaces using Vue.js and JavaScript to improve user engagement and operational efficiency.
- Optimized application performance, usability, and responsiveness through frontend enhancements and continuous improvement initiatives.
- Collaborated with cross-functional teams to gather requirements, validate system functionality, and implement software solutions aligned with business objectives.
- Performed testing, debugging, troubleshooting, and maintenance activities to ensure application reliability and business continuity.
- Contributed throughout the software development lifecycle (SDLC), including development, testing, deployment, and post-deployment support.

Software Engineer | PT Menara Terus Makmur

MAY 2026 - NOW

- Developed and maintained enterprise web applications to support business digitalization, operational excellence, and process automation initiatives.
- Designed and implemented responsive user interfaces using Vue.js and JavaScript, enhancing usability, application performance, and user experience.
- Collaborated with stakeholders to analyze business requirements and translate them into scalable, maintainable, and efficient software solutions.
- Conducted testing, debugging, deployment, and application maintenance activities to ensure system reliability, security, and optimal performance.
- Worked closely with cross-functional teams to deliver digital solutions that support continuous improvement and organizational productivity.

PROJECTS

MyPadi – Rice Disease Expert System

Tech Stack: Laravel, MySQL, Tailwind CSS

Project Description

MyPadi is a web-based expert system developed to assist farmers in identifying rice plant diseases and obtaining treatment recommendations through a rule-based diagnostic approach. The system aims to improve accessibility to agricultural knowledge and support early disease detection, helping farmers make informed decisions to increase crop productivity and reduce potential losses.

Responsibilities & Contributions

- Designed and developed a web-based expert system using Laravel and MySQL to support rice disease diagnosis and treatment recommendations.
- Implemented rule-based decision-making mechanisms to simulate expert knowledge and provide accurate diagnostic results.
- Developed knowledge base management modules to manage disease information, symptoms, causes, and treatment recommendations.
- Designed relational database structures to support consultation history, disease classification, symptom mapping, and recommendation data.
- Built responsive user interfaces using Tailwind CSS and JavaScript to ensure accessibility across desktop and mobile devices.
- Developed user management functionalities for administrators and end users.
- Implemented consultation workflows that guide users through disease identification processes based on selected symptoms.
- Conducted system testing, debugging, and validation to ensure diagnostic accuracy, usability, and application reliability.
- Optimized application performance and database queries to improve responsiveness and user experience.
- Participated in deployment and maintenance activities to ensure long-term system stability.

Key Features

- Rice disease diagnosis
- Rule-based expert system
- Symptom-based consultation
- Treatment recommendations
- Knowledge base management
- Consultation history tracking
- User and administrator management
- Reporting and monitoring dashboard

SIM Klinik – Mobile Healthcare Management Application

Tech Stack: Flutter, MySQL, REST API

Project Description

SIM Klinik is a mobile healthcare management application designed to support clinic operations by digitizing patient administration, medical records, appointment scheduling, and healthcare service management. The application aims to improve operational efficiency, data accessibility, and service quality for healthcare providers and patients.

Responsibilities & Contributions

- Developed a cross-platform mobile application using Flutter to support clinic management and healthcare service operations.
- Designed and implemented patient registration modules to manage patient information and healthcare records efficiently.
- Developed appointment scheduling functionalities to streamline patient visits and healthcare service coordination.

- Integrated RESTful APIs to enable secure communication between mobile applications and backend systems.
- Implemented medical record management features to improve accessibility and organization of patient healthcare information.
- Designed responsive and intuitive user interfaces to provide a seamless user experience for healthcare staff and patients.
- Developed authentication and authorization mechanisms to ensure secure access to sensitive healthcare data.
- Participated in database design and API integration processes to support data consistency and application scalability.
- Conducted application testing, debugging, and performance optimization to ensure reliability and usability.
- Assisted in deployment, maintenance, and continuous improvement initiatives to enhance application functionality.

Key Features

- Patient registration management
- Electronic medical records (EMR)
- Appointment scheduling
- Healthcare service administration
- User authentication and authorization
- REST API integration
- Patient data management
- Mobile accessibility for healthcare staff
- Reporting and operational monitoring

OshiTime – Internal Workflow & Approval Management System

Tech Stack: Laravel, MySQL, Tailwind CSS

Project Description

OshiTime is an internal business application designed to streamline approval workflows and enhance operational efficiency across multiple departments. The system centralizes approval requests, status tracking, and workflow monitoring into a single integrated platform, improving transparency and process control within the organization.

Responsibilities & Contributions

- Designed and developed a web-based workflow management system using Laravel and MySQL.
- Implemented Role-Based Access Control (RBAC) to manage user permissions and approval hierarchies across departments.
- Developed approval tracking and status monitoring features to improve process visibility, accountability, and traceability.
- Built responsive and user-friendly interfaces using Tailwind CSS and JavaScript to enhance user experience.
- Optimized database schema and business workflows to improve system performance, scalability, and maintainability.
- Collaborated with stakeholders to translate business requirements into technical solutions and system features.
- Performed testing, debugging, deployment, and post-deployment maintenance to ensure system stability.

Key Features

- Multi-level approval workflow system
- Role-based user and permission management (RBAC)
- Approval history and audit tracking
- Dashboard with reporting and analytics
- Real-time notification and status monitoring

PT AICC – SHE Department Internal Workflow & Management System

Tech Stack: Laravel, PHP, MySQL, Tailwind CSS, JavaScript

Project Description

PT AICC SHE Department Internal System is a web-based application developed to streamline internal operational workflows within the Safety, Health, and Environment (SHE) department. The system centralizes approval processes, department activities, and internal data management to improve efficiency, transparency, and control.

Responsibilities & Contributions

- Designed and developed a web-based internal system for the SHE Department at PT AICC using Laravel and MySQL.
- Implemented Role-Based Access Control (RBAC) to manage user permissions and approval hierarchy within the department.
- Developed multi-level approval workflow system to support internal operational processes.
- Built responsive and user-friendly interfaces using Tailwind CSS and JavaScript.
- Optimized database structure to support scalable and efficient department-level data management.
- Collaborated with SHE department stakeholders to translate business requirements into technical solutions.
- Conducted testing, debugging, deployment, and maintenance to ensure system stability.

Key Features

- SHE department workflow management system
- Multi-level approval workflow
- Role-based access control (RBAC)
- Activity tracking and history logs
- Dashboard for monitoring internal operations

SKILLS

C, C#, C++, PHP JavaScript, Vue.js	Golang, Laravel, Node.js, Django REST API Development	Database Management Git, Github, & Docker
---------------------------------------	--	--

EDUCATION

Undergraduate Student – Informatics Faculty of Information and Communication Technology (FICT) Horizon University Indonesia • Currently studying software development and programming fundamentals.	AUGT 2023 - NOW
--	------------------------

ADDITIONAL INFORMATION

- **Languages:** English.
- **Certifications:** Samsung Solve Tomorrow, EC-Council (NDE), Alibaba Cloud
- **Awards/Activities:** Achievements & Project Leadership, Achievements & Leadership Experience, Honors, Achievements, and Leadership
